

ABSTRACT OF THE DISCLOSURE

[0029] There is provided a vehicle with an inclement weather lighting system. The vehicle comprises a vehicle body having an inside and an outside defining a vehicle's rear. Positioned within the inside of the vehicle body is a safety light switch. Moreover, inclement weather lights, which are disposed on the vehicle's rear, is in electrical communication with the safety light switch. As such, when the safety light switch is activated, the inclement weather lights are operative to project at least one beam therefrom so as to alert ensuing vehicles during an inclement weather condition.
